Before working with graphs, we will take a look at the domain (the set of input values) for which the logarithmic function is defined. Recall that the exponential function is defined as  $y = b^x$  for any real number  $x$  and constant  $b > 0$ ,  $b \neq 1$ , where. The domain of  $y$  is  $\left(-\infty, \infty\right)$ .

The broad classification of bacteria as anaerobic, aerobic, or facultative is based on the types of reactions they employ to generate energy for growth and other activities. In their metabolism of energy-containing compounds, aerobes require molecular oxygen as a terminal electron acceptor and cannot grow in its absence (see Chapter 4). Anaerobes, on the other hand, cannot grow in the presence ...
